Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering)

Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering)

The repair of deteriorated, damaged and substandard civil infrastructures has become one of the most important issues for the civil engineer worldwide. This important book discusses the use of externally-bonded fibre-reinforced polymer (FRP) composites to strengthen, rehabilitate and retrofit civil engineering structures, covering such aspects as material behaviour, structural design and quality assurance.

The first three chapters of the book review structurally-deficient civil engineering infrastructure, including concrete, metallic, masonry and timber structures. FRP composites used in rehabilitation and surface preparation of the component materials are also reviewed. The next four chapters deal with the design of FRP systems for the flexural and shear strengthening of reinforced concrete (RC) beams and the strengthening of RC columns. The following two chapters examine the strengthening of metallic and masonry structures with FRP composites. The last four chapters of the book are devoted to practical considerations in the flexural strengthening of beams with unstressed and prestressed FRP plates, durability of externally bonded FRP composite systems, quality assurance and control, maintenance, repair, and case studies.

With its distinguished editors and international team of contributors, Strengthening and rehabilitation of civil infrastructures using fibre-reinforced polymer (FRP) composites is a valuable reference guide for engineers, scientists and technical personnel in civil and structural engineering working on the rehabilitation and strengthening of the civil infrastructure.

- Reviews the use of fibre-reinforced polymer (FRP) composites in structurally damaged and sub-standard civil engineering structures
- Examines the role and benefits of fibre-reinforced polymer (FRP) composites in different types of structures such as masonry and metallic strengthening
- Covers practical considerations including material behaviour, structural design and quality assurance

From reader reviews:

James Shafer:

Have you spare time to get a day? What do you do when you have far more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a stroll, shopping, or went to the particular Mall. How about open as well as read a book called Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering)? Maybe it is being best activity for you. You recognize beside you can spend your time with your favorite's book, you can wiser than before. Do you agree with its opinion or you have additional opinion?

Joan Burton:

The reserve with title Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering) has a lot of information that you can find out it. You can get a lot of benefit after read this book. This kind of book exist new knowledge the information that exist in this reserve represented the condition of the world right now. That is important to yo7u to be aware of how the improvement of the world. This kind of book will bring you throughout new era of the the positive effect. You can read the e-book on your own smart phone, so you can read the item anywhere you want.

Jeff Weaver:

The book Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering) has a lot info on it. So when you check out this book you can get a lot of gain. The book was compiled by the very famous author. The writer makes some research just before write this book. This particular book very easy to read you can obtain the point easily after reading this book.

Jason Rickman:

What is your hobby? Have you heard that question when you got students? We believe that that issue was given by teacher for their students. Many kinds of hobby, Every person has different hobby. And you also know that little person like reading or as reading through become their hobby. You need to know that reading is very important and also book as to be the issue. Book is important thing to provide you knowledge, except your current teacher or lecturer. You will find good news or update regarding something by book. Numerous books that can you go onto be your object. One of them is this Strengthening and Rehabilitation of Civil Infrastructures Using Fibre-Reinforced Polymer (FRP) Composites (Woodhead Publishing Series in Civil and Structural Engineering).
