Fourier Analysis on Number Fields (Graduate Texts in Mathematics) (v. 186) Dinakar Ramakrishnan, Robert J. Valenza

A modern approach to number theory through a blending of complementary algebraic and analytic perspectives, emphasising harmonic analysis on topological groups. The main goal is to cover John Tate's visionary thesis, giving virtually all of the necessary analytic details and topological preliminaries -- technical prerequisites that are often foreign to the typical, more algebraically inclined number theorist. While most of the existing treatments of Tate's thesis are somewhat terse and less than complete, the intent here is to be more leisurely, more comprehensive, and more comprehensible. While the choice of objects and methods is naturally guided by specific mathematical goals, the approach is by no means narrow. In fact, the subject matter at hand is germane not only to budding number theorists, but also to students of harmonic analysis or the representation theory of Lie groups. The text addresses students who have taken a year of graduate-level course in algebra, analysis, and topology. Moreover, the work will act as a good reference for working mathematicians interested in any of these fields.

From reader reviews:

Dennis Simpson:

Have you spare time to get a day? What do you do when you have a lot more or little spare time? Yes, you can choose the suitable activity for spend your time. Any person spent their particular spare time to take a walk, shopping, or went to the Mall. How about open or even read a book entitled Fourier Analysis on Number Fields (Graduate Texts in Mathematics) (v. 186)? Maybe it is to become best activity for you. You know beside you can spend your time together with your favorite's book, you can smarter than before. Do you agree with its opinion or you have various other opinion?

Luther Ritenour:

In this 21st centuries, people become competitive in most way. By being competitive now, people have do something to make these people survives, being in the middle of the actual crowded place and notice by simply surrounding. One thing that often many people have underestimated that for a while is reading. Yes, by reading a e-book your ability to survive increase then having chance to remain than other is high. To suit your needs who want to start reading some sort of book, we give you this specific Fourier Analysis on Number Fields (Graduate Texts in Mathematics) (v. 186) book as basic and daily reading reserve. Why, because this book is greater than just a book.

Barbra Poole:

The guide with title Fourier Analysis on Number Fields (Graduate Texts in Mathematics) (v. 186) has lot of information that you can find out it. You can get a lot of profit after read this book. That book exist new understanding the information that exist in this reserve represented the condition of the world right now. That is important to yo7u to understand how the improvement of the world. This particular book will bring you within new era of the syndication. You can read the e-book on the smart phone, so you can read the item anywhere you want.

Duane Sills:

A lot of people always spent their free time to vacation or go to the outside with them family members or their friend. Do you know? Many a lot of people spent many people free time just watching TV, or playing video games all day long. If you want to try to find a new activity honestly, that is look different you can read any book. It is really fun in your case. If you enjoy the book that you read you can spent all day every day to reading a guide. The book Fourier Analysis on Number Fields (Graduate Texts in Mathematics) (v. 186) it is very good to read. There are a lot of folks that recommended this book. We were holding enjoying reading this book. Should you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore simply to read this book out of your smart phone. The price is not too costly but this book provides high quality.
