Weng Cho Chew, Mei Song Tong, Bin Hu

Integral Equation Methods for Electromagnetic and Elastic Waves (Synthesis Lectures on Computational Electromagnetics) Weng Cho Chew, Mei Song Tong, Bin Hu

Integral Equation Methods for Electromagnetic and Elastic Waves is an outgrowth of several years of work. There have been no recent books on integral equation methods. There are books written on integral equations, but either they have been around for a while, or they were written by mathematicians. Much of the knowledge in integral equation methods still resides in journal papers. With this book, important relevant knowledge for integral equations are consolidated in one place and researchers need only read the pertinent chapters in this book to gain important knowledge needed for integral equation research. Also, learning the fundamentals of linear elastic wave theory does not require a quantum leap for electromagnetic practitioners. Integral equation methods have been around for several decades, and their introduction to electromagnetics has been due to the seminal works of Richmond and Harrington in the 1960s. There was a surge in the interest in this topic in the 1980s (notably the work of Wilton and his coworkers) due to increased computing power. The interest in this area was on the wane when it was demonstrated that differential equation methods, with their sparse matrices, can solve many problems more efficiently than integral equation methods. Recently, due to the advent of fast algorithms, there has been a revival in integral equation methods in electromagnetics. Much of our work in recent years has been in fast algorithms for integral equations, which prompted our interest in integral equation methods. While previously, only tens of thousands of unknowns could be solved by integral equation methods, now, tens of millions of unknowns can be solved with fast algorithms. This has prompted new enthusiasm in integral equation methods.

From reader reviews:

Jose Suh:

Nowadays reading books be a little more than want or need but also turn into a life style. This reading addiction give you lot of advantages. The benefits you got of course the knowledge even the information inside the book in which improve your knowledge and information. The info you get based on what kind of publication you read, if you want have more knowledge just go with knowledge books but if you want experience happy read one using theme for entertaining like comic or novel. Often the Integral Equation Methods for Electromagnetic and Elastic Waves (Synthesis Lectures on Computational Electromagnetics) is kind of book which is giving the reader unforeseen experience.

Jennifer Pittman:

This book untitled Integral Equation Methods for Electromagnetic and Elastic Waves (Synthesis Lectures on Computational Electromagnetics) to be one of several books that best seller in this year, that's because when you read this book you can get a lot of benefit upon it. You will easily to buy that book in the book retail outlet or you can order it by way of online. The publisher of the book sells the e-book too. It makes you quickly to read this book, as you can read this book in your Mobile phone. So there is no reason to you personally to past this book from your list.

Janice Smith:

The reserve with title Integral Equation Methods for Electromagnetic and Elastic Waves (Synthesis Lectures on Computational Electromagnetics) includes a lot of information that you can learn it. You can get a lot of profit after read this book. This kind of book exist new knowledge the information that exist in this book represented the condition of the world at this point. That is important to yo7u to understand how the improvement of the world. This particular book will bring you within new era of the glowbal growth. You can read the e-book on the smart phone, so you can read that anywhere you want.

Tyler Dean:

Playing with family within a park, coming to see the coastal world or hanging out with buddies is thing that usually you have done when you have spare time, and then why you don't try matter that really opposite from that. A single activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Integral Equation Methods for Electromagnetic and Elastic Waves (Synthesis Lectures on Computational Electromagnetics), it is possible to enjoy both. It is very good combination right, you still need to miss it? What kind of hangout type is it? Oh come on its mind hangout folks. What? Still don't obtain it, oh come on its referred to as reading friends.
